

General description

These electrical connectors are designated MS because of the interchangeability and operating characteristics are determined by U. S. Military Specifications. The several designations of MS and VG connectors meet different requirements of MILC- 5015. These designations and general descriptions are as follows:

Shell

Shell constructions include solid back shell (A) and environmental resistant (E, F & R). Environmental resistant connectors provide a moisture barrier and assure a positive seal. Shell styles consist of wall type receptacles (3100), cable receptacles (3101), box receptacles (3102), straight plugs (3106) and angle plugs (3108). Shell hardware is manufactured from aluminium alloy and cadmium plated with olive drab chromate finish. This finish has excellent conductivity; it is non-reflecting and corrosion resistant. Black anodised finish and cadmiumfree zinc plating with olive drab chromate finish are also available. For details, contact factory.

Contacts

Pin and socket contacts are of brass and generally silver plated. Gold plating is also available. For details contact factory. These contacts are available for solder or crimp termination. Special arrangements of contacts for pre-mating and pre-earth are also available.

Inserts and grommet

Synthetic inserts and grommet manufactured according to MIL-R-3065, offer high dielectric strength and are resistant to oils, gasoline and low temperature.

General description

Plugs are available in A, F and R types. Receptacles are available in A, E, F and R types.

A solid backshell

Intended for general service usage to provide convenient means of connecting and disconnecting electrical circuits in industrial and military applications.

Environmental resisting

Intended for use where the connector will be subject to heavy condensation and rapid changes in temperature or pressure and/or where the connector is subjected to high vibratory conditions.

E Environmental resisting with grommet seal and strain relief backshell except for 3102 type.

F Environmental resisting with grommet seal, strain relief backshell and front gasket seal for plug type.

R Environmental resisting with grommet seal, shorter and lightweight.

Features for VG reverse bayonet coupling connectors with Mil-C-5015 insert patterns:

- Quick positive coupling
- No lockwiring required
- High shock and vibration capabilities
- Operating temperature range with Neoprene inserts: -55° C to +125° C
- Insert available in Neoprene material (alternate inserts materials available upon request)
- Available in both crimp and solder terminations
- Contacts available in gold and silver plating
- Numerous finishes available
- Zinc alloy plating (cadmium free) available
- 500 couplings minimum
- Rugged construction; aluminum or stainless steel components
- Intermateable with existing VG95234 Connectors

C	200V	3000V

Insert orientations

To avoid cross-plugging problems in applications requiring the use of more than one connector of the same size and arrangement, alternate insert rotations are available as indicated in the accompanying chart.

As shown in the diagram below, the front face of the pin insert is rotated within the shell in a clockwise direction from the normal shell key. The socket insert would be rotated counterclockwise the same number of degrees with respect to the normal shell key.

The following insert arrangements have the same alternate insert rotations for W,X,Y and Z which areas below:

Degree			
W	X	Y	Z

Note - For ordering information on flat gaskets and PG adaptors, contact factory.

Ordering MS/VG series connectors

To obtain the specific connector required, write down the connector number from the typical example below. Only inserts shown in the availability chart shown on page 7 can be specified. Connectors are delivered with protective plastic dust covers. Include premating contact designation only if premating contact is required. The second letter in the premating contact designation stands for the actual contact position. Any deviation from the specified design is indicated by - **D** at the end of the connector number. - **B** at the end of the connector number indicates telescopic bushing provided.
